

AI Workflow Audit And Implementation

Focused AI workflow discovery, automation opportunity mapping, human-in-the-loop controls, and implementation roadmaps for service businesses, agencies, public-sector suppliers, and operations teams.

Entry offer AI Workflow Audit Sprint	Typical range USD 1,500-5,000 / GBP 1,200-4,000	Output Workflow map, risk review, automation matrix, first sprint backlog
Prime/subcontract workstream Public-sector or enterprise discovery	Typical range GBP 3,000-15,000	Output Use-case discovery, governance notes, 30/60/90-day roadmap

Core Workstreams

- AI workflow discovery and current-state process mapping
- Automation opportunity matrix ranked by value, effort, and risk
- Human-in-the-loop control design and auditability notes
- CRM, service, lead-response, and follow-up workflow audits
- AI operations runbooks, implementation backlog, and roadmap
- Fixed-scope proof-of-concept planning for one workflow

Good-Fit Buyers

- Service businesses with lead response, quote, booking, or follow-up friction
- Agencies needing white-label AI workflow discovery or implementation-readiness support
- Public-sector primes needing specialist AI/process workstream support
- CRM-heavy teams with manual routing, service requests, inbox work, or tool sprawl
- Healthcare, insurance, recruitment, accounting, consulting, and local-service operators with repeated workflows

Relevant Tools And Workflow Areas

- Salesforce, HubSpot, Pipedrive, GoHighLevel-style CRMs
- Google Workspace, Microsoft 365, spreadsheets, forms, and intake systems
- Zapier, Make, n8n, Airtable, Notion, knowledge bases, and RAG-style support workflows
- Browser automation, human approval queues, service dashboards, and follow-up processes

Guardrails

- No revenue guarantees or invented case-study claims
- No regulated legal, tax, medical, financial, or compliance advice
- No private account access required for audit unless separately agreed
- Implementation is scoped separately after discovery
- For regulated workflows, human approval, auditability, and data controls are part of the design

Short Outreach Version

I help teams turn AI ambition into practical workflow implementation: current-state maps, automation opportunity matrices, human-in-the-loop controls, AI operations runbooks, and implementation roadmaps. The smallest useful entry point is a paid AI Workflow Audit Sprint that identifies one workflow worth implementing and the risks to manage before build.

Use with marketplace proposals, partner outreach, and prime/subcontract conversations. Replace contact details or signature fields before external submission.
