

Enterprise AI Operations Pilot

A fixed-scope workstream for teams where slow handoff, manual admin, inconsistent follow-up, or unclear workflow ownership may be costing revenue, time, or service quality.

GBP 10k-25k	GBP 50k-150k	4-8 weeks
Focused pilot	Enterprise pilot	Typical delivery window

When This Is A Fit

- A team handles high-value leads, cases, bookings, tickets, clients, donors, or employers.
- The workflow has delays, manual routing, repeated copy-paste work, or inconsistent follow-up.
- The buyer wants practical AI adoption, but the real problem is process orchestration.
- There is a clear workflow that can be piloted safely with human oversight.

Pilot Objective

Improve one high-value workflow by mapping the current process, identifying the strongest AI and automation opportunities, designing safe human-in-the-loop handoffs, and delivering a practical implementation roadmap. The workstream focuses on measurable workflow improvement rather than vague AI experimentation.

Core Work Packages

Work Package	What It Produces
1. Workflow Discovery	Current-state workflow map, handoffs, bottlenecks, process risks, and data readiness review.
2. Pilot Design	Target workflow, AI/human handoff rules, automation backlog, measurement plan, and owner responsibilities.
3. Implementation Support	Templates, scripts, routing rules, automation specifications, testing plan, and team enablement.

Deliverables

- Workflow map showing current and target state.
- Opportunity matrix ranked by value, effort, risk, and confidence.
- AI/human handoff rules and escalation logic.
- Message templates, scripts, and routing rules.
- Automation specification for CRM, email, calendar, ticketing, forms, or other workflow tools.
- 30/60/90-day roadmap and pilot report.
- Business case for the next phase where the value is credible.

Example Use Cases

Workflow	Potential Pilot
Lead response	Route new enquiries, confirm next steps, trigger follow-up, and surface urgent leads.
Consultation booking	Improve booking recovery, reminders, qualification, and post-consultation follow-up.
Employer callbacks	Prioritize employer enquiries, standardize discovery, and reduce response delay.
Customer onboarding	Template first steps, reduce support questions, and flag stalled customers.
Public service workflow	Map case intake, routing, evidence checks, and human approval points.

Pricing Options

Option	Scope	Investment
Focused pilot	One workflow, one team, limited implementation support.	GBP 10,000-25,000
Enterprise pilot	Multiple workflows or departments, stakeholder interviews, implementation support, business case.	GBP 50,000-150,000
Partner workstream	Subcontracted or white-labelled discovery/pilot support inside a larger project.	GBP 5,000-15,000+

Qualification Questions

1. Which workflow is slow, manual, or inconsistent today?
2. Roughly how many leads, enquiries, clients, tickets, cases, or bookings move through it each month?
3. What is one missed opportunity, delayed case, or manual failure worth?
4. Which tools are involved in the current workflow?
5. Who owns the process internally?
6. What would make a pilot obviously worthwhile?

Payment And Start Conditions

- Work starts after payment, funded escrow, signed purchase order, or agreed procurement route.
- Typical terms are 50% upfront and 50% before final delivery for direct private work.
- Public-sector or enterprise procurement terms can be handled through the agreed route.
- No revenue guarantee is made. The work identifies credible improvements and implements bounded workflow assets.

Next Step

Start with a short fit conversation. If there is a clear workflow worth improving, scope a paid discovery or pilot. If there is not, do not sell a project that should not exist.

Suggested Reply

If this looks relevant, the fastest next step is a 20-minute fit call. I will ask about the workflow volume, value of delays or misses, current tools, ownership, and what would make a pilot obviously worthwhile.
